

# 5G MODULAR SHROUD

## Flexible, reliable solution to expedite deployments

Comptek's 5G modular shroud is designed for maximum flexibility. Deploy as a single module, bi-sector or tri-sector array. With an integrated bracket design, each modular shroud can be strapped to existing vertical infrastructure including light poles, small-cell poles, wood poles and traffic signal poles.

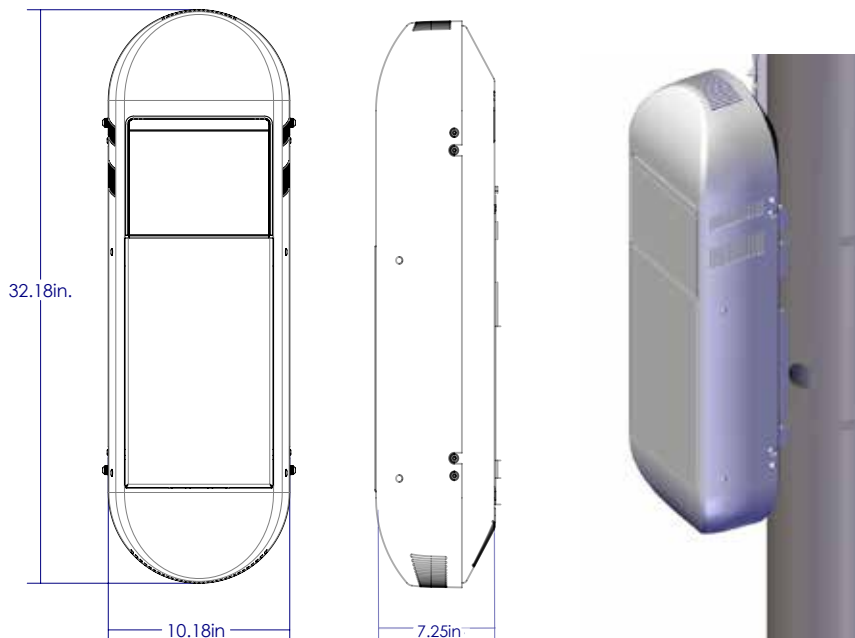

In compliance with GR-487 thermal performance requirements, the 5G modular shroud manages airflow through Comptek's patent pending airflow duct system.

Three-step installation ensures fast deployments and accelerates densification of wireless networks.

- Ventilation screen to prevent bug intrusion
- Water diverting channels
- 10% down tilt
- Internal cable management
- RF transparent concealment film
- Slim bracketry with galvanized finish
- UV protected materials
- Custom colors and finishes

Mount to existing vertical infrastructure
